ABSTRACT AMENDMENTS

Amend the Abstract as follows:

A method is specified for operating a device for controlling and/or monitoring a production and/or packaging installation on a bus (33), the controller (30) comprising having an interface (34) to be connected to the bus (33), having a main memory (36) for the storage of a control program (31), and also means for executing being able to execute the control program (31). Configuration data (40) are stored in a removable memory module (39). When the controller (30) is restarted, the configuration data (40) are read out and, by using the configuration data (40), an access is made to a remote memory (32) which can be reached via the bus (33) and which comprises a transfer to the controller (30) of data stored in the remote memory (32).
